Summary

Mobile App Developer with 3+ years of experience in building high-performance, user-friendly mobile applications. Specialized in React Native (1.5 years) and supported by 2 years of Flutter development experience, with strong skills in clean UI/UX, API integration, state management, and performance optimization. Has basic knowledge of embedded programming and experience with WordPress website design and management. A motivated team player with strong problem-solving skills, eager to learn and deliver reliable, scalable digital solutions in fast-paced environments.

Skills & Expertise

Front-End:

React Native, JS, Flutter, Dart, WordPress, Google Maps API , UI/UX, hooks, State Management.

Back-End:

REST APIs, Firebase, FireStore, Push Notification, Node JS (Basic)

Embedded & Systems:

Embedded Programming (Basic)

Tools & DevOps:

Git, GitHub, Postman, VS Code, Swager, Xcode, HomeBrew, Jira

Work EXPERIENCE

React Native Developer | LDB Saudi Arabia | April 2025 - Present

- Developed and redesigned React Native (Expo) mobile applications, including a student–tutor booking platform.
- Built responsive UI screens and implemented form validation and secure authentication (Face ID).
- Integrated REST APIs using Axios and React Query for data fetching and state synchronization.
- Implemented session scheduling, availability checks, and payment workflows.
- Managed global app state and user data using AsyncStorage, ensuring smooth navigation and performance.

Flutter Developer | Canary Calnetics | Aug 2023 - December 2024

- Developed and maintained Flutter mobile applications, working on both new and existing projects.
- Built “Canary” independently from scratch using GetX, local notifications, Google Maps, and precise location tracking.
- Contributed to “Storibee”, a live AI-based book reading and listening app, as part of a 6-member team.
- Integrated REST APIs, implemented audio playback, playlists, and multi-language support using Provider.
- Implemented Stripe payments, fixed bugs, optimized performance, and supported deployment to Play Store and App Store.

Key Projects

Takavi Internal (React Native)

Education platform connecting students and tutors for online and in-person learning sessions with scheduling and availability management.

- Worked on redesigning an existing live application with a new UI/UX in collaboration with the design team.
- Implemented student and tutor roles, including tutor profile creation, subject selection, and session management.
- Built form validation and secure user authentication, including Face ID integration.
- Developed calendar-based session scheduling, availability checking, and session invitations.
- Enabled students to search, invite, and book tutors for online or physical sessions.
- Integrated REST APIs and managed user/session data using AsyncStorage.

Trips.pk (React Native)

Hotel and flight booking mobile application with search, booking, and secure online payment functionality.

- Developed a hotel and flight ticket booking mobile application from scratch with a small team of 2 developers.
- Led the project end-to-end, managing planning, task distribution, and delivery.
- Implemented the complete UI from Figma designs, focusing on smooth UX and responsive layouts.
- Integrated REST APIs for hotel search, flight booking, and user data.
- Implemented Stripe payment integration for secure online transactions.
- Successfully completed and deployed the app on Google Play Store within 3 months.

Storibee (Flutter)

AI-based book reading and listening application with multilingual support and personalized audio storytelling.

- Worked on an AI-based book reading and listening mobile application as part of a 6-member development team.
- Contributed to an existing production app, focusing on feature implementation and stability.
- Implemented and maintained audio playback for stories, including AI-generated voice content powered by ElevenLabs.
- Handled front-end integration of AI story generation provided by backend services.
- Supported multi-language and multi-theme functionality for improved user experience.
- Fixed bugs, improved performance, and assisted in deploying updates to Google Play Store and Apple App Store.

Canary (Flutter)

Emergency alert mobile application that detects user unresponsiveness and automatically notifies selected contacts with real-time location.

- Developed an emergency alert mobile application focused on user safety during overdose risk situations.
- Built the app independently from start to finish, handling design, development, testing, and delivery.
- Implemented motion and unresponsiveness detection using device sensors and shake detection.
- Triggered local alarm notifications to alert the user before escalating actions.
- Automatically sent SMS alerts via Twilio to selected emergency contacts when the user became unresponsive.
- Integrated Google Maps to share precise real-time location with emergency contacts.
- Used GetX for lightweight state management and clean app architecture.
