Summary

I'm a Flutter Developer with +1 year of practical experience crafting intuitive and efficient mobile applications using Flutter and Dart. Skilled in UI/UX implementation, Firebase integration, and delivering responsive cross-platform solutions. Passionate about writing clean code and continuously learning new technologies to drive meaningful projects forward.

Education

Bachelor of Engineering - Computer and Control Systems Department 09/2018 – 07/2023
Mansoura University - Faculty of Engineering
Grade | Very Good

Professional Experience

Wekala 08/2025 – 12/2025
Wekala is a pair of e-commerce mobile applications: one for sellers and trailers, and another for customers, featuring Remote | Cairo | Egypt
all essential functionalities for shopping clothing products.

Key Contributions and Features Implemented:
An authentication system with multi-step registration and login processes and CRUD operations for these features:

- Branches registration
- Favorite products
- Delivery areas management
- Admin users
- Feeds and stories
- Points and gifts system
- Sales management with multiple states (placed, confirmed, shipped, completed)

Projects

Balance Labs - مختبرات بالانس
A mobile application for one of Jeddah's leading medical laboratories, delivering fast and accurate test results.
Balance Labs: Google Play , App Store
Role: Led development using Clean Architecture, applying SOLID principles, with responsive UI and Cubit for state management. Key features implemented: offers management, reservation system, and additional functionalities like user profiles and result tracking.

Mock Meet
Pair of apps (learners & instructors) for an interactive online training platform with live Zoom courses, bookings, and secure payments — similar to Udemy but focused on real-time, hands-on learning.
Role: Contributed to core development using Clean Architecture, applying SOLID principles, with responsive UI and Cubit for state management. Key features implemented: wallet integration, order management with multiple states (e.g., pending, confirmed, completed), and more including session booking and real-time notifications.

Awa2el - أوائل
Subscription-based educational app for Kuwaiti school students (primary to secondary), offering live Zoom classes, recorded lessons, and curriculum-focused content to support school learning.
Role: Handled key aspects of development using Clean Architecture, applying SOLID principles, with responsive UI and Cubit for state management. Key features implemented: authentication system, courses and curriculum navigation, articles repository, events scheduling, and additional tools like progress dashboards and interactive quizzes.
