Abdul Haseeb

Flutter Engineer

+92 343 2641600
abdulhaseeb.9820@gmail.com

Graduate Software Engineer and Flutter Developer with 1+ year of experience delivering scalable, production-grade cross-platform applications. Achieved measurable performance gains, including 15–20% improvements in application responsiveness and faster system interactions through clean architecture and targeted refactoring. Played a key role in enhancing reliability, data consistency, and user experience across multiple applications in high-usage production environments.

Work Experience

Flutter Engineer - Sheikhani Group **Mar 2025 - Present**
Karachi, Pakistan
Contributed to high-traffic food delivery platform development, optimizing cross-platform mobile apps for thousands of daily users. Led real-time feature delivery, performance refactoring, and team support including code reviews, PR merges, build preparation for testers, and interim guidance during lead absence.

- Contributed to the development and scaling of production-grade cross-platform mobile applications serving thousands of daily users, with a strong focus on performance, reliability, and real-time user experience.
- Led the delivery of key real-time features and performance refactoring initiatives, achieving a 15–20% reduction in application latency and noticeably smoother user interactions.
- Took ownership beyond feature development by supporting the team with code reviews, PR merges, build preparation for QA/testing, and providing technical guidance during periods of lead unavailability.
- Designed and implemented efficient real-time tracking and mapping workflows using socket-based communication and structured state management, including smooth animations, intelligent event triggering, and dynamic route handling to improve responsiveness while optimizing battery and resource usage.
- Improved backend data efficiency by refactoring API payloads, removing redundant fields, and simplifying response structures, resulting in up to 20% faster system interactions.
- Optimized UI performance in data-heavy screens by refactoring list rendering logic, minimizing unnecessary rebuilds, and improving widget lifecycle handling, leading to smoother scrolling and better frame stability.
- Played a key role in improving overall application stability, data consistency, and production readiness across multiple user-facing applications.

Professional Projects

FoodPapa (User App):

- Contributed to the development of high-usage consumer workflows, focusing on real-time order visibility, discovery flows, and smooth user interactions under heavy traffic.
- Improved search, filtering, and data presentation logic to support fast, accurate results while maintaining responsive UI performance.
- Enhanced user experience and reliability by reducing unnecessary reloads and improving state transitions across critical screens.

FoodPapa (Multi-Vendor App):

- Worked on operational tools used by merchants to manage incoming orders, statuses, and daily workflows in real time.
- Improved data consistency and synchronization across systems, helping reduce production issues and operational delays during peak hours.
- Contributed to stability and performance improvements that supported smoother vendor operations at scale.

FoodPapa Rider App:

- Developed and refined rider-facing delivery workflows to support accurate order pickups, live status updates, and timely food deliveries in on-demand environments.
- Improved navigation and route-update logic to ensure smooth transitions and reliable behavior during active deliveries under varying network conditions.
- Enhanced application responsiveness and stability in real-world usage scenarios, supporting more predictable operations and reduced friction for delivery riders.

Badar Expo Solutions – Live Event & Engagement App:

- Built and launched a mobile experience supporting real-time information and engagement for large-scale event audiences, enhancing access to event schedules, updates, and interactive content.
- Improved application performance and responsiveness to support high concurrent usage during peak event times, contributing to a smooth and reliable user experience at major trade shows and exhibitions.

Technical Skills & Expertise

- **Programming & Frameworks:** Dart, Flutter, Java, C++
- **Mobile & Cloud Technologies:** Firebase (Auth, Firestore, Cloud Messaging), Google Maps SDK, Pusher, REST APIs, WebSockets
- **State Management & Architecture:** GetX, Provider,Riverpod, BLoC, Clean Architecture, OOP, SOLID principles, Design Patterns
- **Development & Collaboration Tools:** Git, GitHub, Jira, Postman, WireMock (Docker)
- **Performance & Optimization:** API refactoring, real-time data synchronization, efficient UI rendering, latency reduction, memory & battery optimization

Education

- **B.Sc. Software Engineering,** Sindh Madressa-tul-Islam University Karachi. **2021 - 2025**
- **F.Sc Pre-Engineering,** Nabi-bagh Z.M Govt College Karachi. **2018 – 2020**
- **S.Sc Computer Science,** True Care Academy Karachi. **2016 – 2018**
