Arooj Sehar

Aspiring AI / ML Engineer

Email: seharrarooj126@gmail.com
Location: Karachi, Pakistan
GitHub: github.com/arooj-26
LinkedIn: linkedin.com/in/arooj-sehar
Portfolio: aroojsehar.vercel.app

PROFESSIONAL SUMMARY

Motivated AI/ML Engineer with a strong foundation in information systems and a deep passion for building intelligent, production-ready applications. Specializing in **Agentic AI**, **Retrieval-Augmented Generation (RAG)**, and **full-stack development** using Python and cloud-native technologies. Currently advancing skills through the Governor Initiative's Agentic AI program, with hands-on experience in multi-agent systems, LangGraph orchestration, and containerized deployments. Adept at transforming complex AI concepts into practical, user-centric solutions.

TECHNICAL SKILLS

Agentic AI:	OpenAI Agent SDK, LangGraph, LangChain, RAG, Prompt Engineering, Claude Code	**Languages:**	Python, JavaScript, TypeScript, SQL
Web Development:	Next.js, React, FastAPI, Streamlit, Tailwind CSS, HTML/CSS	**Cloud & DevOps:**	Docker, Kubernetes, GitHub Actions, Vercel
Data & Databases:	PostgreSQL, Neon, Apache Kafka, Pandas	**Tools & Protocols:**	MCP, Git, VS Code, Jupyter, Linux

EDUCATION

Master's in Information Management & Library Science

Completed

University of Punjab

- Gained strong foundations in information systems, data management, and research methodologies
- Developed analytical and organizational skills applicable to data-driven AI solutions

Agentic AI & Cloud Native Development

Ongoing

PIAIC / Governor Initiative for AI & Computing

- Intensive program covering Agentic AI, OpenAI Agent SDK, LangGraph, and cloud-native development
- Building production-grade AI applications using Docker, Kubernetes, and modern deployment pipelines
- Developing multi-agent systems and RAG-based applications with real-world use cases

PROJECTS

TODO App — Full-Stack Task Management

github.com/arooj-26/todo-hackathon

- Built a full-stack task management application with user authentication and complete CRUD operations
- Implemented event-driven architecture using Apache Kafka for real-time data streaming
- Deployed on Kubernetes with containerized microservices and PostgreSQL database backend
- Designed responsive UI with Next.js, TypeScript, and Tailwind CSS

Next.js | TypeScript | PostgreSQL | Kubernetes | Kafka | Tailwind CSS

Python Learning Platform — Interactive Education App

github.com/arooj-26/learn-flow-app

- Developed an interactive platform for beginners to learn Python through structured lessons and quizzes
- Integrated OpenAI-powered chatbot for real-time coding assistance and doubt resolution
- Implemented Google authentication and user management with BetterAuth
- Enabled in-browser Python execution using Pyodide for hands-on coding exercises

Python | Pyodide | Docusaurus | OpenAI | Google Auth | Chatbot

Interactive Python Book — Digital Learning Resource

github.com/arooj-26/python-book

- Created a digital interactive book with embedded code editors and live Python execution
- Built progressive learning paths from basics to advanced topics with real-time feedback
- Implemented semantic search using Qdrant vector database for intelligent content discovery
- Developed RESTful API backend with FastAPI and Neon (PostgreSQL) for user progress tracking

Python | FastAPI | React | Qdrant | Neon DB | Jupyter

ADDITIONAL

- **Self-Directed Learning:** Actively building projects with RAG pipelines, multi-agent systems, and full-stack AI applications
- **Open Source:** Regular contributor on GitHub — building and sharing AI/ML projects with the community
- **Interests:** AI research papers, educational content creation, open-source contribution, cloud-native architecture
